

## Antron with StainRESIST™ Technology | Product Sheet

### Antron with StainRESIST™ fiber technology- an irresistible combination

Is your environment tough? Now you have another option beyond solution dyed nylon when selecting carpets for environments prone to stains. Providing the best of both worlds, Antron with StainRESIST™ fiber technology combines the unsurpassed styling flexibility of yarn dyed fiber with permanent resistance to the most common commercial interior stains, ensuring long-lasting performance and good looks under the most challenging conditions.

With its excellent level of stain resistance, Antron with StainRESIST™ fiber technology is ideal for the challenges of demanding locations, including healthcare, corporate, education and hospitality spaces, where it can stand up to difficult stains – everything from coffee and wine, to fruit juice and cough syrup. All this, while offering the design flexibility of a yarn dyed fiber, makes Antron with StainRESIST™ fiber technology the ideal choice when styling is important and stain resistance is a must.

### Get your kicks with Type 6,6

*Did you know that not all nylon carpet fibers are the same?*

All Antron with StainRESIST™ fiber technology carpets feature the benefits of Type 6,6 nylon, a specially engineered polymer for outstanding carpet performance. Among other advantages, the tighter structure of Type 6,6 means it's tougher for stains to penetrate the carpet – so a spill takes longer to become a stain, allowing more time for clean-up.

Whether your key concerns are staining, crushing, matting, abrasive wear – or all of the above – the tighter structure of Type 6,6 nylon delivers a more resilient and colorfast foundation for your carpet than Type 6 nylon.

In addition, all carpets with Antron with StainRESIST™ fiber technology are treated with DuraTech® soil resistance treatment, a one-time soil resistance treatment that doesn't wash or walk off – delivering the long-term protection you want.

### What shape is your carpet in?

In addition to the qualities of Type 6,6 nylon, fibers of Antron with StainRESIST™ fiber technology also features unique hollow fiber shapes, which provide excellent soil resistance and soil release. These specially engineered fibers resist soiling so your carpet looks good between cleanings. Also, the fibers readily release soil during cleaning to help maintain that like-new appearance with routine maintenance.

### Benefits

- Offers excellent stain resistance for yarn dyed fiber, broadening the styling options for challenging environments
- Features exceptional resistance to soiling, crushing and matting, for long-lasting appearance retention
- Provides an environmentally sustainable choice, as certified by the Environmentally Preferred Product (EPP) designation
- Available on Antron® Legacy™ and Antron® Brilliance™ nylons

## Go certifiably green

The good news is, you don't have to choose between carpet fiber performance and environmental sustainability. With Antron with StainRESIST™ fiber technology, you can have both.

Antron® carpet fiber is currently the first and only carpet fiber to have earned the Environmentally Preferred Product (EPP) designation. Reviewed and certified by an independent third party, Scientific Certification Systems (SCS), EPP certification is a comprehensive evaluation of a product's environmental impact and is a measurement of sustainability.

In addition, Antron with StainRESIST™ fiber technology is available with SCS-certified 90% pre-consumer recycled content, to meet the demands of concerned customers who choose to specify recycled material in their carpet constructions.

## Reach your peak performance

With the highest fiber performance standards for carpet in the industry, no one is harder on carpets than INVISTA. Before a carpet can claim the Antron® brand, it must pass a rigorous 14-point laboratory evaluation certifying that it meets the Antron® Brand Performance Standard.

Because carpet made of Antron® nylon is engineered to retain its like-new appearance for years under the harshest conditions, you can realize significant savings in maintenance and costs over the lifetime of your carpet. With a low total cost of ownership among its many benefits, you can specify Antron with StainRESIST™ fiber technology with confidence.

TECHNICAL SPECIFICATIONS	
Polymer	Type 6,6 nylon
Fiber Shape	Hollow Filament
Fiber type	Bulked Continuous Filament (BCF)
Protective Treatment	DuraTech® soil resistant treatment
Available Colors	Unlimited
Recycled Content	Available with 90% pre-consumer Recycled Content
Warranties	Carpets of Antron with StainRESIST™ fiber technology are covered for stain resistance, antistatic, and fiber loss from abrasive wear.
