

Soil Resistance Performance of Antron® Nylon

Carpets of Antron® nylon provide soil resistance and soil release superior to competitive carpets.

The following test results demonstrate the superiority of Antron® Legacy nylon versus competitive type 6,6 and type 6 nylon carpets when subjected to foot traffic in a busy school environment. The carpets shown are of equivalent construction and were maintained with daily vacuuming.

Actual floor performance proves Antron® Legacy nylon's four hole hollow filament shape and DuraTech® soil resistant treatment provides superior soil resistance and long term appearance retention.
